IETF Hackathon - cbor4dns

IETF 117

22-23 July 2023

San Francisco

Hackathon Plan

Progress on application/dns+cbor encoder/decoder

- CBOR-based DNS message format for smaller messages in DoH and DoC
- Draft: <u>draft-lenders-dns-cbor</u>
- Python-based implementation cbor4dns
 - dnspython for the DNS part,
 cbor2 for the CBOR part
 - Encoder needed fixing
 - Decoder needed implementing

What got done

Done:

- Encoder (needs larger test vector)
- Finding a lib name (thanks Marco!)
- Going public: https://github.com/netd-tud/cbor4dns

Almost done:

Decoder: mostly done, packed CBOR support missing

What we learned

- Issues with existing draft:
 - Section elision may need rethinking
 - Dedicated specs for pseudo-RRs (e.g. OPT) may be needed

Wrap up
